

SGA medical SOLUTIONS

Prescription Services

We offer a comprehensive, fully automated Point-of-Care medication dispensing program, enabling patients to receive their prescribed medications directly from their provider. Using our system, the practice will have the ability to dispense directly to the patients. The program includes dispensing options for workers compensation and group healthcare plans.

Our program offers your practice the opportunity to generate a positive financial return in addition to enhanced patient care. By leveraging our volume, we typically procure medications 60-80% below the cost available to most physicians. By allowing patients to receive medication from your practice with their prescription card, this program enhances patient safety, compliance, and convenience.

What is Point-of-Care Dispensing?

Point-of-Care (POC) Dispensing allows patients to purchase generic medications directly from their doctor. Medications are pre-packaged in quantities and doses matched to the prescribing requirements of the physician.

Our system offers the most comprehensive and user-friendly dispensing software on the market. The program enables the clinician to dispense from a formulary of medications customized for their practice.

POC dispensing promotes increased compliance and improved clinical outcomes for your patients. Because our program includes real-time insurance adjudication, the patient's cost for the generic medication is their regular co-pay.

What are the Patient and Practice Benefits?

Patient Benefits

- Immediate access to their medication needs without another trip to the pharmacy
- Improved understanding of their medications and treatment
- Direct delivery of medication from Physician to Patient

Practice Benefits

- Increased utilization of medications as prescribed
- High compliance with medication protocols
- Ability to assist patient with prescription costs on a case-by-case basis
- Opportunity to develop a significant revenue stream with little or no disturbance to practice operations

Our system provides a turn-key solution for insurance adjudication, claims processing, hardware, software, training, and administrative support. Our detailed dispensing and reconciliation reports enable the practice to track prescriptions, reimbursements, and profit margins.

We provide flexibility to prescribers when selecting their formularies, access to our network of 58,000 pharmacies and coordination with our mail order service to deliver those medications not stocked in the office direct to your patient's door step. Our experienced billing, collection, and financial services help manage the revenue cycle, while detailed management reports illustrate performance.

Implementation

We will facilitate implementation in all areas, coordinating with your staff to ensure a successful transition:

- Physical Medication Storage and Security
- Complete Office Set-Up
- Dispensing Logs and Audit Trails
- Policies and Procedures
- Training and Monitoring
- Consulting with Physician to Establish Formulary
- Managing the Mail-Order Services for Non-Stock Medications
- Inventory Management Systems
- Detailed Reporting

Our dispensing program is customized to meet your practice's specific needs. Our program offers the Best-in-Class solution to allow your practice to provide a continuum of quality patient care. By directly providing medications to your patients, your practice can offer a lower cost solution while facilitating compliance and better patient communication.
